

This model represents the "parse tree" that is populated during the parsing of an Oil file. Once fully populated, methods may be executed to check model consistency etc.

This model was derived from the EBNF definition of the Oil language as defined in the specification document see <http://www.osek-vdx.org/mirror/oil25.pdf>

AUTOSAR specific extensions are shown using red text.

Tags indicate associated non-terminal within EBNF definition.
